HEATHER M. STAPLETON

Heather Stapleton is an Associate Professor of Environmental Sciences and Policy in the Nicholas School of the Environment at Duke University in Durham, NC.

Dr. Stapleton received her Ph.D. in environmental chemistry from the University of Maryland at College Park in 2003. From 2003-2005 she was a postdoctoral research associate at the National Institute of Standards & Technology in their Analytical Chemistry Division. In September of 2005, she accepted a position as assistant professor in the Nicholas School of the Environment at Duke University. In 2008, she was awarded an Outstanding New Environmental Scientist Award (ONES) from the National Institute of Environmental Health Sciences for her research grant proposal entitled “Children’s Exposure to Brominated Flame Retardants: Effects on Thyroid Hormone Regulation. Dr. Stapleton’s research examines the sources, fate, transport, and metabolism of halogenated organic contaminants in the environment. Her current research projects focus on human exposure to flame retardant chemicals, particularly in children, and on the identification of flame retardant chemicals in consumer products.

STUART HARRAD

Stuart Harrad is Professor of Environmental Chemistry at the School of Geography, Earth and Environmental Sciences at the University of Birmingham in Birmingham, UK.

Stuart got his B.Sc. in Applied Chemistry from De Montfort University in 1984. He then moved to the University of East Anglia, where he completed an M.Sc. in Analytical Chemistry in 1985, and his Ph.D. on the levels and sources of PCDD/Fs in UK soils in 1989. After several postdoctoral appointments in both the USA and UK, he took up his present post in September 1994. He heads a National Network on Persistent Organic Pollutants, sits on the International Advisory Board of the Annual International Symposia on Halogenated Persistent Organic Pollutants, and chaired the 28th such symposium in Birmingham in 2008. Stuart is an environmental chemist, whose research addresses all aspects of the environmental sources, fate, and behavior of persistent organic pollutants (POPs). He has particular interests in human exposure to POPs with a focus on indoor pathways. He is also active in research that explores the environmental forensics utility of chirality.

ACKNOWLEDGEMENTS

The organizers of BFR 2014 would like to acknowledge the generous support of our sponsors and the extraordinary effort of those who made this workshop possible. We thank Miriam Diamond, Mehran Alae, Heather Stapleton, Susan Shaw, and Arlene Blum for acting as session chairs; it was largely through their efforts that the difficult decisions of oral vs. poster were made. We would also like to acknowledge Brandi Host at Indiana University Conferences, Jennifer Reynolds, and the entire Hites’ Laboratory for their assistance.
